TITLE: Job Portal with Search & Filters

GITHUB LINK :

1. ABSTRACT

The Job Portal with Search and Filters is a simple web application developed using HTML, CSS, and JavaScript. It allows users to search for job opportunities by job title and filter jobs based on location and job type. The application displays job details such as company name, location, and employment type in an organized format. Users can also apply for a job using the “Apply Now” button, which confirms the application through a notification. The project demonstrates the implementation of dynamic filtering, user interaction, and responsive web design.

2. PROBLEM STATEMENT

Job seekers often spend a lot of time searching through numerous job postings to find suitable opportunities. Without proper filtering and search functionality, locating relevant jobs becomes difficult and time-consuming. This project aims to simplify the job search process by providing search and filter options that help users quickly find jobs matching their preferences.

3. OBJECTIVES

Develop a simple and user-friendly job portal.

Allow users to search jobs by title.

Provide filters for location and job type.

Display job information clearly.

Enable users to apply for jobs through an interactive button.

Improve user experience using JavaScript-based filtering.

4. PROJECT SCOPE

The project includes:

Displaying available job listings.

Searching jobs using the job title.

Filtering jobs by location.

Filtering jobs by employment type.

Apply Now button with confirmation alert.

Clean and responsive user interface.

Future Enhancements:

User login and registration.

Employer job posting feature.

Database integration.

Resume upload functionality.

Online application tracking.

Email notifications.

5. TECHNOLOGIES USED

HTML5

CSS3

JavaScript (ES6)

Visual Studio Code

Google Chrome (Browser)

6. APPLICATION FLOW

The application loads all available job listings.

The user enters a job title in the search box.

The user can select a preferred location.

The user can select a preferred job type.

JavaScript filters the job list instantly.

Matching job cards are displayed.

Clicking the Apply Now button displays an application confirmation message.

7. KEY REACT CONCEPTS USED

Note: Your current project is developed using HTML, CSS, and JavaScript, not React.

If your faculty asks for React concepts, you can mention:

Functional Components

useState Hook (for search and filters)

Props

Event Handling

Conditional Rendering

Array Mapping using .map()

For the current version, you can write:

DOM Manipulation

Event Listeners

Array Filtering (filter())

Dynamic HTML Rendering

JavaScript Functions

Template Literals

8. EXPECTED OUTPUT

The application displays:

Job listings in card format.

Search box for job titles.

Location filter dropdown.

Job type filter dropdown.

Filtered job results.

“Apply Now” button.

Confirmation alert after clicking the button.

9. CHALLENGES FACED

Designing an attractive user interface.

Implementing multiple filters together.

Dynamically updating job listings.

Handling empty search results.

Making the layout responsive.

Solutions:

Used JavaScript's filter() function.

Added event listeners for real-time filtering.

Designed reusable job cards using template literals.

10. LEARNING OUTCOMES

Designing an attractive user interface.

Implementing multiple filters together.

Dynamically updating job listings.

Handling empty search results.

Making the layout responsive.

Solutions:

Used JavaScript's filter() function.

Added event listeners for real-time filtering.

Designed reusable job cards using template literals.

11. CONCLUSION

The Job Portal with Search and Filters project successfully provides an efficient way for users to search and filter job opportunities. It demonstrates the practical use of HTML, CSS, and JavaScript for developing an interactive web application. The project improves the job searching experience through dynamic filtering and an easy-to-use interface. It also serves as a strong foundation for future enhancements such as database integration, authentication, and online job applications.
